

AuroraLamp — Light That Breathes

Bring atmosphere to your space with **AuroraLamp**, the tiny USB-C powered light that glows with emotion. Behind its calm milky glass sphere lives a smart microcontroller that blends colors the way nature does — soft, alive, and never twice the same.

Modes of Light

Your AuroraLamp has a small **3-position jumper** underneath. Each position unlocks a different world of color:

1. Rainbow Fade

A continuous flow through the full color spectrum.

Watch red melt into orange, drift to green, slide into blue and violet — then gently return to the start.

Perfect for calm evenings or creative work sessions.

2. Sunstorm

From the deep glow of molten orange to blinding flashes of near-white — this mode captures the drama of a solar storm.

Warm, intense, and full of motion.

Ideal for energizing the room or giving your setup a futuristic pulse.

3. Christmas Glow

Traditional colors, reinvented.

Green pines, golden warmth, and a hint of red shimmer fade gracefully together.

A soft and festive light that feels alive — not blinking, but breathing.

Power

Just plug in any **USB-C power source** — your laptop, charger, or power bank.

The lamp remembers its last mode when power is restored.

About the Design

AuroraLamp isn't just a gadget — it's a craft.

Each color blend is tuned with **gamma-corrected fading**,

a technology that mimics the way the human eye perceives light.

The result: perfectly smooth transitions and natural brightness.

Made for those who love light — not just lamps.
